

Evonik Sponsorship of Team Overdrive

This is the seventh year that Evonik has sponsored Team Overdrive. Thank You!!

Without your support we would not be able to compete in FTC and learn about science and technology

Team Overdrive 2011-2012 Season

Team Overdrive 2011-2012 season was very successful

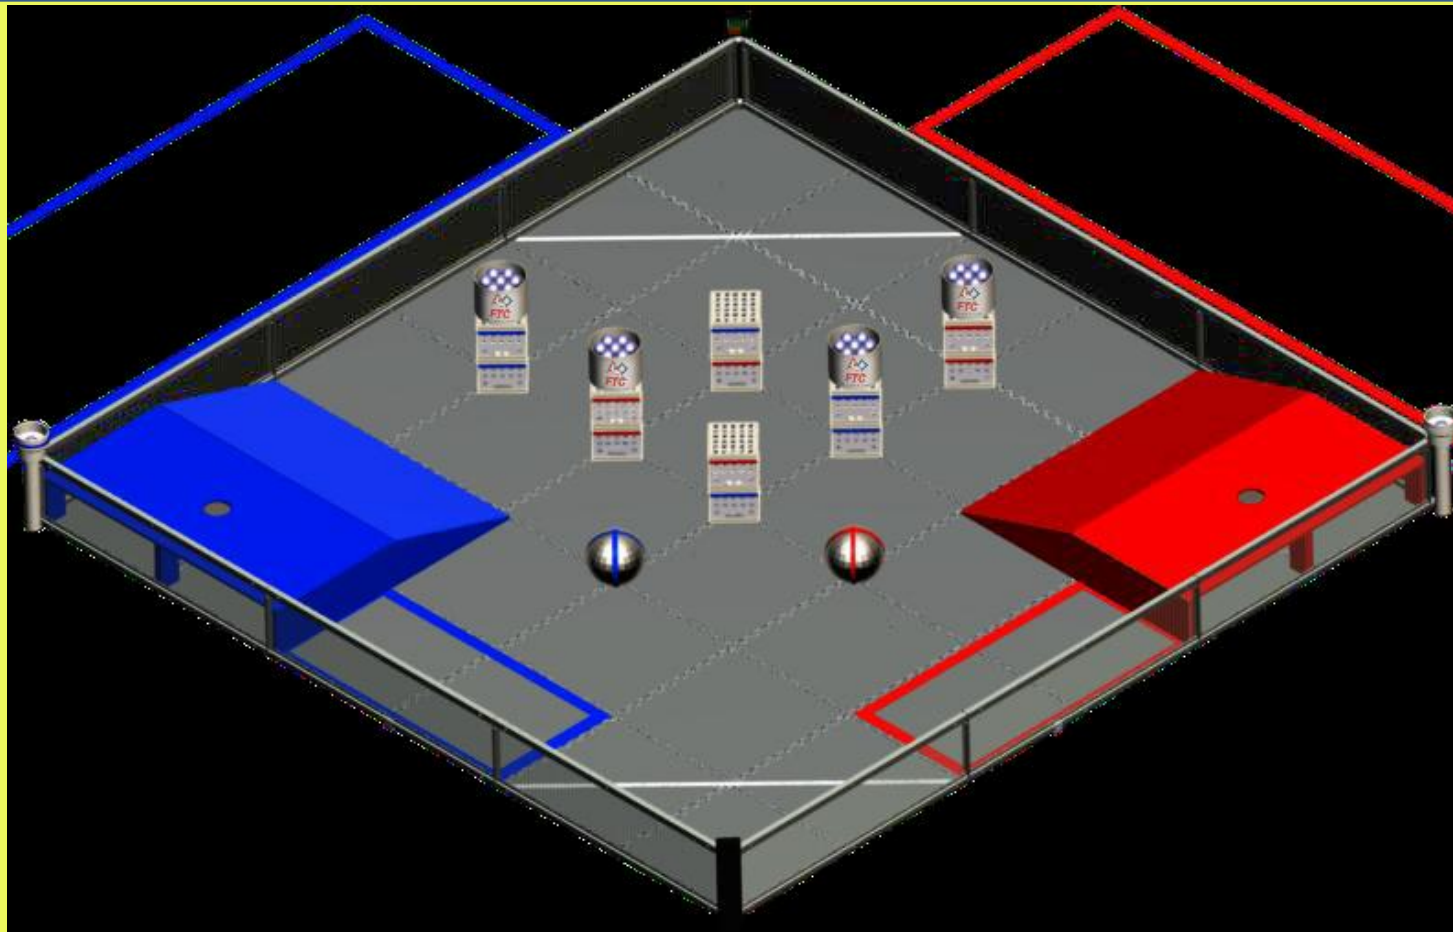

We had epic failure and learned from that to have success with the robot

We learned about science and technology

2011-12 FTC Game

- Autonomous mode
- Driver Control mode
- Scoring through racquetball pickup and placing in crate
- High scoring through lifting crates high

[57] **ABSTRACT**
A tennis ball retrieving apparatus comprises a wheeled vehicle having a front end and a rear end. The vehicle has a ball storage container disposed at a level enabling ready removal of balls therefrom by a person next to the vehicle while the person is in a standing position. There are a pair of horizontal ball gathering arms at the front of the vehicle arranged in V formation to provide an apex portion to which gathered balls are fed. A pair of the wheels of the wheeled vehicle are in traction contact with the surface on which the vehicle is supported to be driven thereby in rotary fashion as the vehicle is moved over the supporting surface. The wheels are supported with the lower portions of the tires spaced from one another less than the diameter of a tennis ball so as to grip the same when a ball is fed thereto. A chute extends from the area just rearwardly of the lower portions of the tires upwardly to the storage container. The feed wheels are operable by successively feeding balls into the chute to cause previously fed balls by nudging contact to be fed upwardly to deposit the balls into the storage container.

[57] **ABSTRACT**
A ball retrieving and storage device for gathering balls lying upon a court floor or other flat surface and including a wheeled box-like collector having a bar extending across the front of the collector, the bar having a ball engaging surface which is normally carried above the floor at a height slightly less than the diameter of the balls to be collected so that when the device is moved over the floor and the bar contacts a ball, the bar is caused to ride across the top of the ball and trap it within the collector.
